Re-Introduction To Web Based Application

innovative • entrepreneurial • global

Web-based Application

- Run on WWW – http protocol
- Using WWW technology & software
- Request and response protocol

Request and Response

Web browsers (request)

Programs running on client computers

Request for documents using URL

eg. Chrome, Firefox

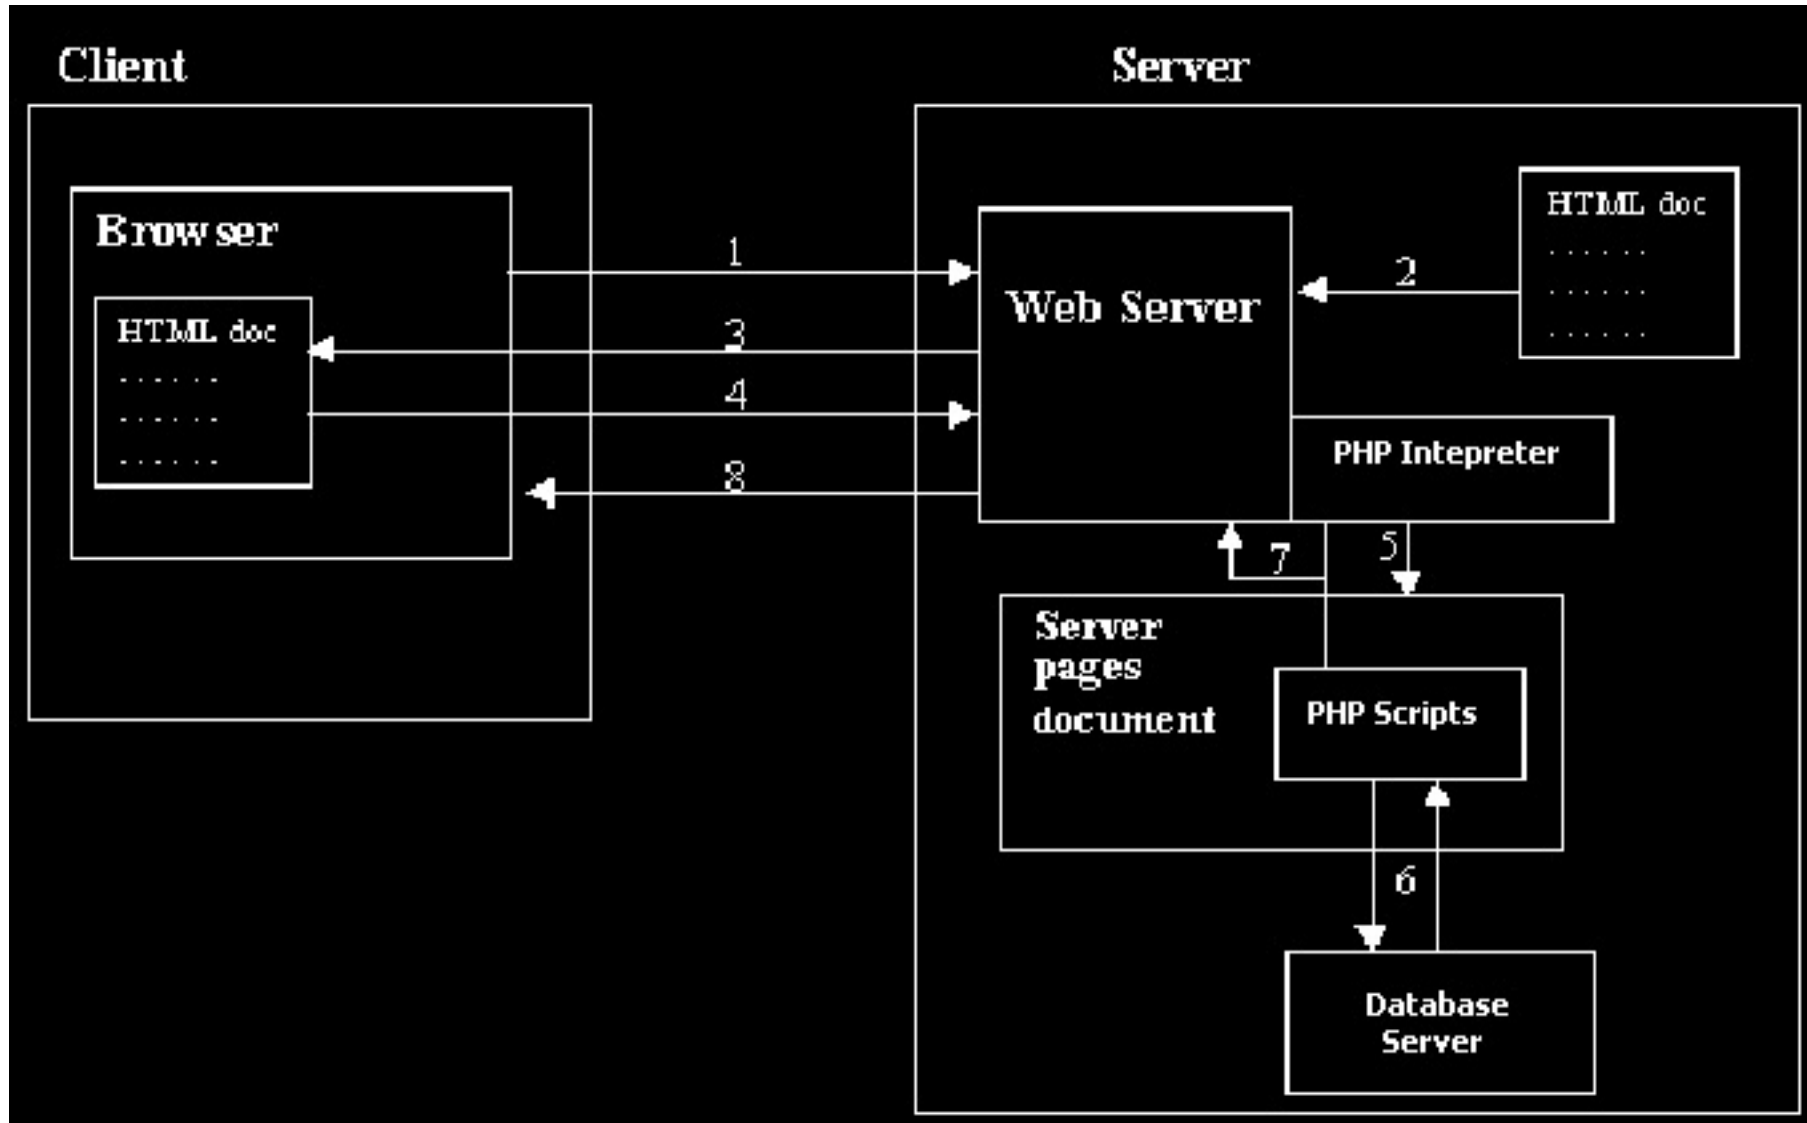

Web servers (response)

Programs that provide documents to browsers

eg. Apache

Web Architecture

How the Web works for static contents (basic architecture)

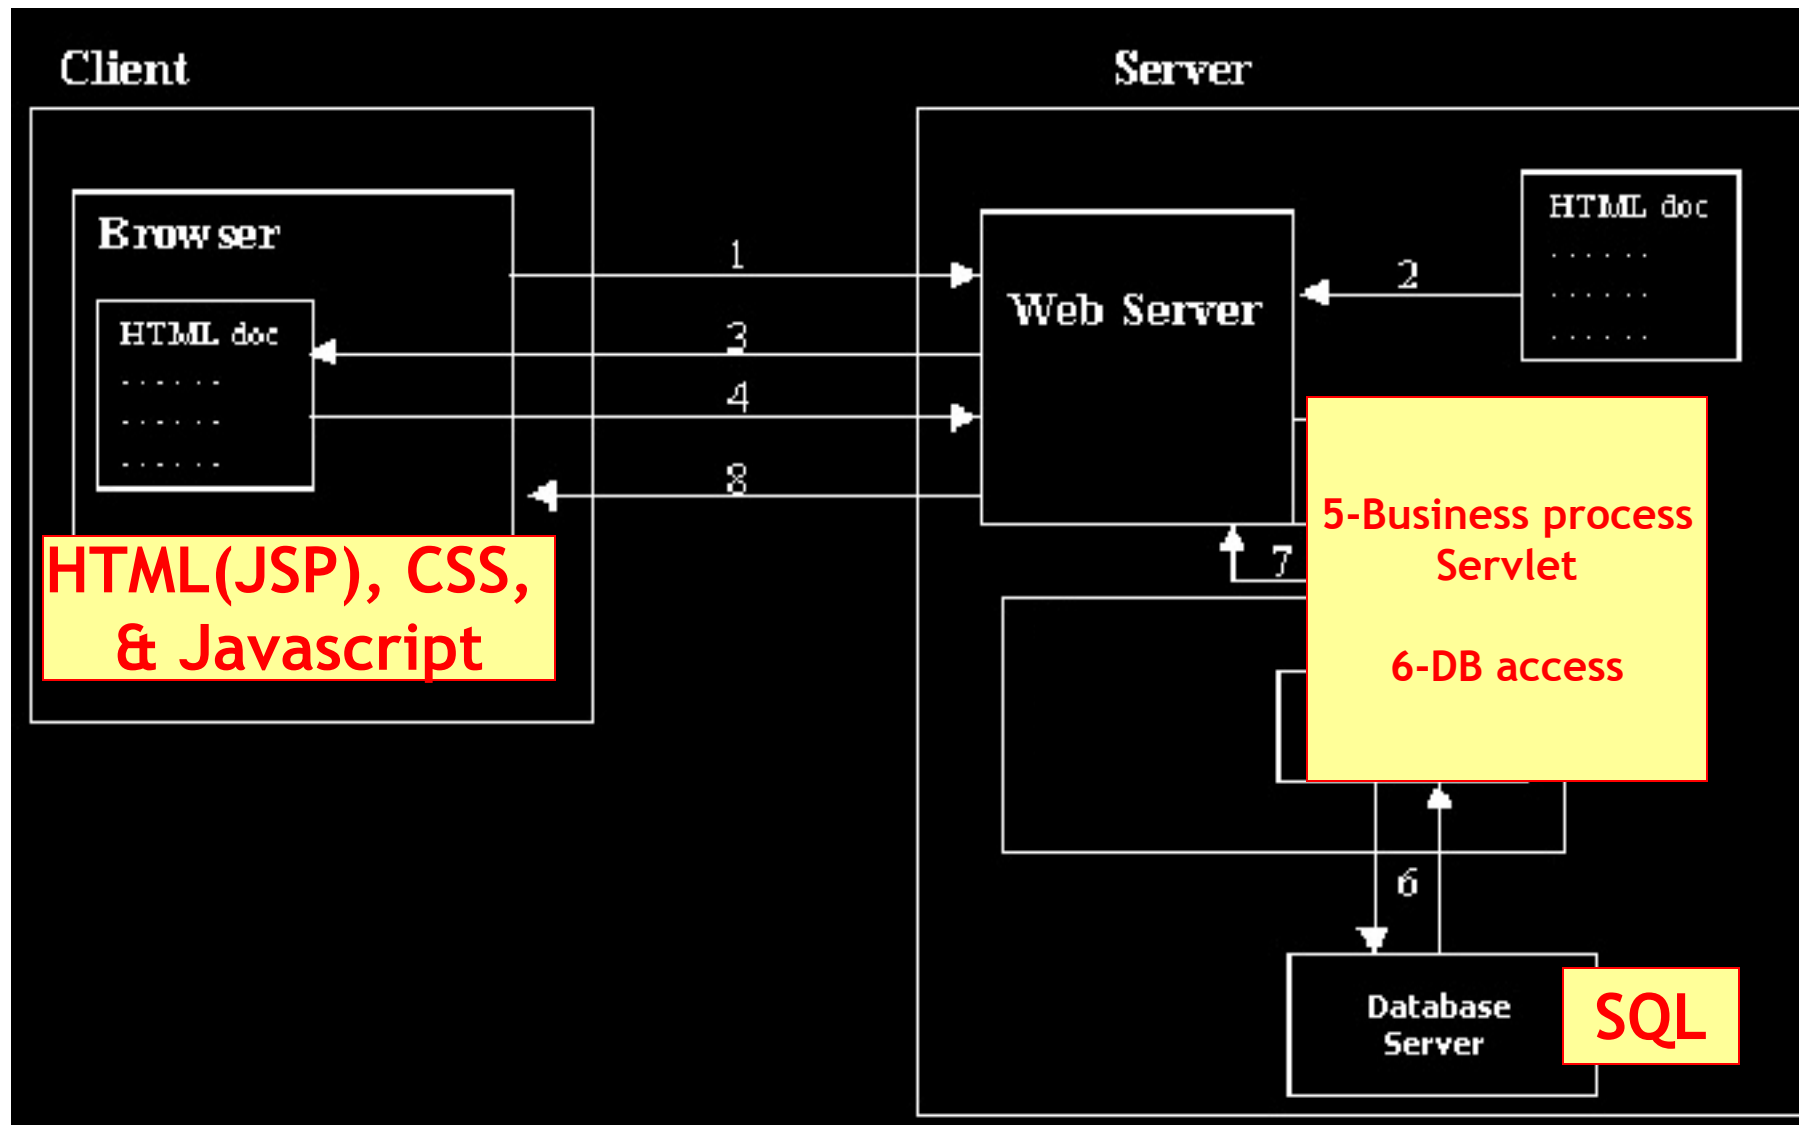

Web Application Architecture

1. End-user request for document in browser
2. Web server find/retrieve the document
3. Web server response by sending the requested document to the end-user browser

Example technology / framework

- Server producing HTML
 - Conventional CGI – Perl, C, C++, Python, VB
 - Java Servlet
 - Server pages – ASP, PHP, JSP
- Client-side script
 - JavaScript

What we will learn

- Server generated HTML
 - Servlet
 - JSP
- Browser CSS – responsive
 - Bootstrap
- Backend Database
 - Mysql/mariadb
